+91 8431893369 ◇ Bengaluru, Karnataka, India

malleshpareet360@gmail.com ◇ github.com/malleshpareet ◇ linkedin.com/in/malleshpareet

PROFESSIONAL SUMMARY

Software Engineer with experience developing scalable backend systems, REST APIs, cloud-native applications, and modern full-stack web platforms. Proficient in Java, Spring Boot, React.js, Next.js, Node.js, PostgreSQL, MongoDB, Docker, and AWS. Passionate about distributed systems, cloud infrastructure, API design, and writing clean, maintainable, and well-tested software. Strong team player with excellent debugging, problem-solving, and software engineering skills.

EDUCATION

Master of Computer Applications (MCA)

Jul 2018 – Dec 2020

CMR University, Bengaluru

CGPA: 8.1

TECHNICAL SKILLS

Languages	Java, JavaScript, TypeScript, Go (Basics), Python
Backend	Spring Boot, Node.js, Express.js, REST APIs, JWT Authentication, WebSocket
Frontend	React.js, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap
Databases	PostgreSQL, MongoDB, MySQL
Cloud	AWS EC2, Docker, Terraform, Linux
Tools	Git, GitHub, Postman, Swagger/OpenAPI, Prisma, VS Code
Concepts	Data Structures, Algorithms, OOP, Networking, Operating Systems, REST API Design, Authentication, Microservices, Distributed Systems Fundamentals

PROFESSIONAL EXPERIENCE

Software Engineer

IRP Innovative Solutions Pvt. Ltd.

Aug 2025 – Present

Developed scalable backend applications using Spring Boot, Node.js, PostgreSQL, and MongoDB while designing and implementing RESTful APIs for web and mobile applications. Built secure authentication and authorization systems using JWT and developed responsive user interfaces with React.js, Next.js, and Tailwind CSS.

Containerized applications using Docker and deployed services on AWS EC2. Integrated third-party APIs including payment gateways, WebSocket services, and cloud platforms to deliver reliable business solutions.

Optimized API performance, database queries, and overall application scalability. Collaborated with cross-functional teams in an Agile environment, participating in code reviews, debugging, testing, and production deployments to ensure high-quality software delivery.

PROJECTS

Httply – API Testing and WebSocket Platform

Developed a production-ready API testing and WebSocket monitoring platform supporting REST APIs, real-time WebSocket connections, Collections, Workspaces, Environment Variables, Request History, and Code Snippet Generation. Designed a scalable backend architecture with secure authentication, collaboration features, and efficient API execution while delivering a modern, responsive user interface.

Technologies Used: Next.js, TypeScript, PostgreSQL, Prisma, Docker, WebSockets, REST APIs, shadcn/ui, Git, and GitHub.

Viber-Code Inspector – AI Code Review Platform

Developed an AI-powered code review platform that analyzes GitHub pull requests and source code to identify bugs, security vulnerabilities, code smells, and optimization opportunities. Implemented intelligent code analysis using Google Gemini, semantic search with vector embeddings, and automated review workflows to help developers improve code quality before deployment. Built a modern dashboard with authentication, repository management, and real-time review insights.

Technologies Used: Next.js 16, React, TypeScript, Tailwind CSS, shadcn/ui, TanStack Query, Zustand, React Hook Form, Zod, Prisma 7, PostgreSQL, Better Auth, GitHub OAuth, Google Gemini, Google Embeddings, Pinecone, Inngest, Vercel AI SDK, Recharts, Git, GitHub, Docker.

Evalo AI – AI Career Building Platform

Developed an AI-powered career development platform that enables users to create professional resumes, optimize LinkedIn profiles, analyze ATS compatibility, and book career consultation sessions with industry experts. Integrated the Gemini API to generate AI-driven resume content, profile recommendations, and personalized career insights. Built scalable REST APIs, implemented secure authentication, and designed a responsive user interface for a seamless user experience.

Key Features: AI Resume Builder, ATS Resume Checker, LinkedIn Profile Optimization, Expert Booking System, AI Career Guidance.

Technologies Used: React.js, Node.js, Gemini API, SQL, Docker, REST APIs.

CERTIFICATIONS

- Spring Boot Development
- REST API Development
- Docker Essentials
- AWS Cloud Fundamentals

ACHIEVEMENTS

- Built Httply, a complete API Testing and WebSocket platform from scratch.
- Designed production middleware integrating payment gateways with IoT vending machines.
- Experience deploying production applications on AWS EC2 using Docker.
- Developed scalable backend APIs consumed by production web and mobile applications.
- Passionate about distributed systems, cloud-native architecture and backend engineering.

PROFESSIONAL STRENGTHS

- Strong analytical and problem-solving skills.
- Excellent debugging and troubleshooting abilities.
- Fast learner with strong ownership mindset.
- Effective communication and collaboration.
- Passion for learning distributed systems and cloud technologies.
